

Submission guide

Rubric coverage, file inventory and review status

Assignment points

Q1 Ideation 15; Q2 Charter 15; Q3 Build 45; Q4 Reflection 5. Total 80. Q3: design 10, core 12, extended 8, observability 5, baseline 5 and cost/evaluation 5. These are allocations, not awarded scores.

Required writeup lengths

Assignment Report pages 1-2: Q1. Pages 3-5: Q2. Pages 6-7: the two-page Q3 writeup. Page 8: the one-page Q4 reflection.

File inventory

01 Assignments; 02 Presentation; 03 Demo; 04 Implementation and architecture; 05 Baseline Results; 06 Evidence; 07 Knowledge Base; 08 Reviewed Outputs. All twelve baseline inputs have recorded outputs or explicit errors. README and workflow exports are included.

Current result

The strict approved RelayOps sample is complete and validated. The free-text baseline records 4 passes and 8 failures. Model fine-tuning has not run. Direct server-side Drive retrieval and GitHub auto-commit require credentials. Browser upload is distinct from server integration.

Final reviewer action

Raghavendra reviews wiki.md, the deck and the AI-assisted reflection before final submission, then decides whether to merge the feature branch into main. No merge or live Jira creation has been performed.

Access

The repository is private and Drive files retain their current sharing policy. Verify assessor access before submitting. No invitations or public-sharing changes are implied.

Demo format

The five-minute video uses synthetic narration over actual evidence and presentation scenes. It is not a continuous live screen recording or Raghavendra voice imitation.

Repository and reproduction

Links and implementation handoff

GitHub feature branch

https://github.com/raghvendrakaushik-del/prd-genie-capstone/tree/Feature/Raghav_IK_Capstone_SEP2026

Google Drive folder

https://drive.google.com/drive/u/0/folders/1NOfn4t_hZHsP4QaP58lgV3a-CT4J3I_K

Start the demonstrated workflow

Open local Langflow at <http://localhost:7860>. Import the reviewed workflow JSON, select the GROQ_API_KEY secret and use the explicit extraction, answer and approval actions shown in the Playground. Never put credentials into source documents. See 04_Implementation/README.md for the full sequence.

Inspect the evidence

Begin with wiki.md and the review manifest. Compare the requirement IDs with the catalog and Jira stories. Inspect native trace 49393cd3-6cbc-46c7-a9a0-f6ea08f5a96e, then read baseline failures before drawing quality conclusions.

Training and publishing

Review training labels and configure a supported training provider before running the supplied job script. Configure a repository-scoped secret before enabling server auto-commit. Preserve exact revision approval, atomic versioning and non-force branch updates.

Architecture files

PRD_Genie_Architecture.mmd describes the two orchestration paths, review loop and output gates. The presentation includes an editable overview diagram. The reviewed product wiki includes a separate detailed RelayOps Mermaid diagram.

Source references

Supplied Problem Statement and original template are retained in the source kit. Current technical references: <https://docs.langflow.org/traces> and <https://console.groq.com/docs/model/openai/gpt-oss-120b>. All sample product facts are explicitly fictional.
